DiNet Dashboard

Introduction

The DiNet Integration Network is a global B2B messaging network that lets you exchange business-critical documents with trading partners all over the world. Giving you complete visibility and peace of mind across your entire file exchange process, the DiNet dashboard can be accessed from any device and enables you to monitor the progress of all transmitted files as they are sent and received.

The dashboard is easy to navigate and contains six tabs including:

- › Home tab
- › Files tab
- › Documents tab
- › Reports tab
- › Alerts tab
- › Account details and billing tab

The '[Alerts](#)' tab of the dashboard allows you to configure alerts based on a variety of criteria and thresholds and notifies you automatically, if there have been any issues during the transmission.

There are two types of alert notification available in the dashboard:

- › **Automatic alerts:** These consist of email, text message and iPhone push notifications
- › **Managed by exception alerts:** These notifications occur when files are not transmitted or received from your trading partners

This guide is designed to help you understand and use the DiNet dashboard alerting feature as effectively as possible to enable you to choose the right alert for your file exchanges and wider business needs.

Alerts Tab Overview

Accessing the 'Alerts' tab

To access the alerts page, you will first need to login to your DiNet dashboard account from the following web address:

<https://web.DiNet.co.uk>

To login, enter your username and password and click on the 'Login' button.

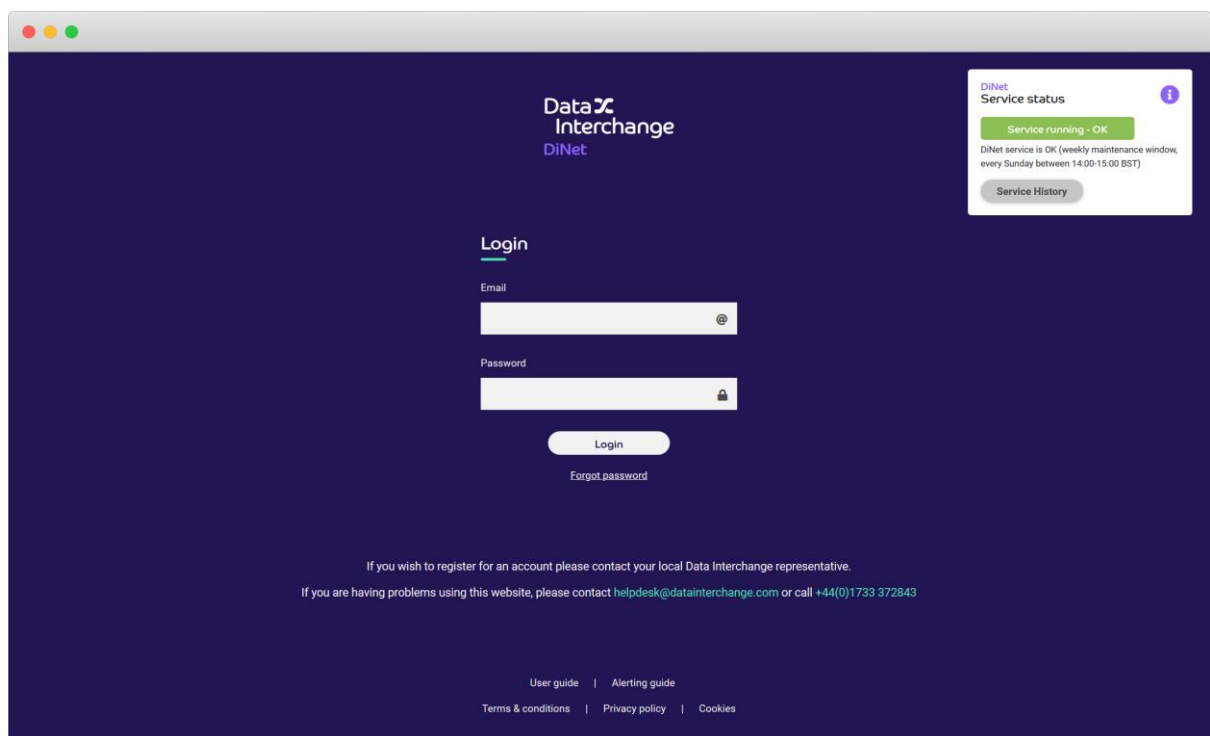

Figure 1 - DiNet dashboard login page

Once you have logged into your dashboard account, you can access the alerts page in two ways:

Navigate to the homepage, click on the 'Alerts' link in the tasks widget and then select 'Set up alerts' or select the 'Alerts' tab from the navigation bar:

Figure 2 - Accessing the 'Alerts' tab

Sections of the 'Alerts tab'

The '[Alerts](#)' tab contains five sections, allowing you to easily configure and manage your alerts.

- › **Create an alert:** Under this heading, you will have the option of being able to create a new alert and see a list of the alerts you have created to enable quick and easy editing.
- › **File alert:** By clicking on '[Configure a custom alert for files sent or received](#)', you will be able to create an alert that is triggered by a file not being sent or received as scheduled, within a specified time frame.
- › **Test:** Clicking on the '[Test](#)' feature will allow you to send a test message to a specified recipient to ensure that alerts are being received before an alert is configured and goes live.
- › **Alert history:** This section gives a complete list of all the alerts that you have received in the past and includes the date, message, alert name, alert status and the action taken upon notification.
- › **Configured alerts:** This section keeps a record of all the details of each '[configured alert](#)' and includes the alert name, alert recipients and whether the alert is active/inactive.

Setting up an alert in the DiNet dashboard

There are several steps that need to be taken when setting up an alert in the dashboard. The key to maximising the benefit of the dashboard alerting feature, is to select the right choice of alert for your specific business requirements and EDI usage.

Whilst each alert denotes the occurrence of a different event or action, every alert is setup in the same fashion with several straight-forward steps:

1. Fill out the alert name field. It's often a good idea to name the alert based on the type of alert
2. Select the most applicable alert type from the '[Alert type](#)' drop-down list
3. Based on the alert type, specify the message alert you want to send
4. Fill out when the alert is to be raised by deciding on the alert criteria

Figure 4 - 'File Acknowledgement not received' fields

To set up these alerts you need to take the following steps:

1. Navigate to the '[Alerts](#)' tab and select '[New alert](#)'
2. Fill out the alert name field.
3. Select the 'File acknowledgement not received' from the 'Alert type' drop-down list
4. Write your chosen message notification of the alert in the '[Message](#)' field
5. Tick the '[Active](#)' box so the alert is activated upon saving of the configuration
6. In the '[After](#)' field, you will need to select an appropriate amount of time to elapse before the alert is triggered, keeping in mind your trading partners' file collection/acknowledgment procedure
7. In the '[Recipients](#)' field, you can then fill out who you wish to receive the alert and whether you would like the notification in email, SMS or I-Phone push format

8. Click on 'Save' and the alert will be activated and accessible to edit or disable from the 'Alerts' tab under the 'Configured alerts' heading

Communications Acknowledgement not received

This alert is configured to occur where a file has been transmitted by DiNet and has not been acknowledged at a communications level by the destination trading partner. Most commonly, this alert denotes when a destination system has not processed a file but can also be triggered if there is a protocol connection issue between DiNet and the trading partner.

To set up these alerts you need to take the following steps:

1. Navigate to the 'Alerts' tab and select 'New alert'
2. Fill out the 'Alert name' field
3. Select 'Communications acknowledgement not received' from the 'Alert type' drop down list
4. Write your chosen message notification of the alert in the 'Message field'
5. Tick the 'Active' box so the alert is activated upon saving of the configuration
6. In the 'After' field, you will need to select an appropriate amount of time to elapse before the alert is triggered, keeping in mind your trading partners' file collection/acknowledgment procedure
7. In the 'Recipients' field, you can then fill out who you wish to receive the alert and whether you would like the notification in email, SMS or I-Phone push format
8. Click on 'Save' and the alert will be activated and accessible to edit or disable from the 'Alerts' tab under the 'Configured alerts' heading

Connections from DiNet to your company are failing

This alert can be setup to arise where connections to your company from DiNet are failing to be established. In circumstances where DiNet cannot make a connection, you will need to investigate your EDI software and connection to ascertain what is stopping DiNet from making a connection to you.

1. Navigate to the 'Alerts' tab and select 'New alert'
2. Fill out the 'Alert name' field
3. Select 'Connections from DiNet to your company are failing' from the 'Alert type' list
4. Write your chosen message notification of the alert in the 'Message' field
5. Tick the 'Active' box so the alert is activated upon saving of the configuration
6. Select the recipients of the alert and how they will receive the notification
7. Click on 'Save' to activate the alert and add it to your list of 'Configured alerts'

File not received by your company

This alert notifies you when there is a file waiting for you on DiNet that has not been collected from your mailbox within a specified time frame. This alert is typically triggered when a file is queued on DiNet and you need to make a call to collect it. If file delivery is automated however, it may be that DiNet has not been able to make a connection to you.

1. Navigate to the 'Alerts' tab and select 'New alert'
2. Fill out the 'Alert name' field
3. Select 'File not received by your company' from the 'Alert type' list
4. Write your chosen message notification of the alert in the 'Message'
5. Tick the 'Active' box so the alert is activated upon saving of the configuration
6. Select appropriate time for the alert to be triggered based on when you expect to receive the file
7. Select the recipients of the alert and how they will receive the notification
8. Click on 'Save' to activate the alert and add it to your list of 'Configured alerts'

File not sent to a trading partner

Denoting a file delivery problem, this alert can be configured to occur when a file you have sent to DiNet has not been transmitted to its intended recipient trading partner within a designated period of time. There are a number of reasons why a file might not have been delivered. It could be a complex technical issue that needs resolving or alternatively, something as simple as your trading partner not yet connecting to DiNet to collect their files.

1. Navigate to the 'Alerts' tab and select 'New alert'
2. Fill out the 'Alert name' field
3. Select 'File not sent to a trading partner' from the 'Alert type' list
4. Write your chosen message notification of the alert in the 'Message' field
5. Tick the 'Active' box so the alert is activated upon saving of the configuration
6. Select an appropriate time for the alert to be triggered in the 'Waiting more than' field, making sure the trading partner will have had enough time to collect the file
7. Select the recipients of the alert and how they will receive the notification
8. Click on 'Save' to activate the alert and add it to your list of 'Configured alerts'

File processing error

This alert is triggered when a processing error has been encountered during the transmission of your file. There are a number of reasons why file processing errors occur and are best resolved by the Managed Services team. If you receive a 'file processing error' alert, please raise a helpdesk ticket with the Managed Services team.

File rejected by DiNet

This type of alert is designed to notify you when one of your files has been rejected by DiNet. The file may have been rejected for a number of reasons including, unknown EDI codes, an unknown SFID or an unconfigured trading partner. In the event of receiving one of these alerts, please raise a helpdesk ticket with the Managed Services team.
