

# Software Test Engineer

**Job type:** Full time

**Location:** Peterborough

**Salary:** £25,000 - £35,000

Data Interchange is a leading provider of electronic data interchange (EDI) and eBusiness integration solutions to over 4,000 global organisations, providing critical functionality for managing communications and data transformation within and beyond the enterprise.

We are seeking a Software Test Engineer to join our .Net agile development team. In this role, you will be working with small teams of developers within an agile environment. Teams are organised according to projects which range from greenfield development employing the latest web-based technologies to continuing to develop our highly successful established Windows product range.

You will be involved with all parts of the product lifecycle, from early analysis to make sure we build the right product, all the way through to checking that we've built the product right.

You may have worked as part of a .Net cross-functional agile team before and have experience of being involved early on in product development. You'll take great enjoyment finding the problems at the earliest possible stage, ideally before a line of code has been written.

**To join our team, you will present the following skills:**

- Seeing software through the user's eyes
- Critical thinking
- Agile development practices
- Use of testing tools
- Great communication tools
- Strong analytical and diagnostic skills
- Familiarity with SQL

**Alongside a competitive salary, we also offer the following:**

- Structured career path
- Individual training budgets
- Flexible working
- Games room
- Regular subsidised staff social events
- Company pension
- Free parking

To apply for this position, please forward a copy of your CV and covering letter to [careers@datainterchange.com](mailto:careers@datainterchange.com)
